

GREEN DESIGN

dossier.

YOUR SPACES OUR GOALS.

After years of experience in the exhibition and event setup industry, one of our main goals is to reduce the company's environmental impact.

To achieve this, we have geared our design and production processes towards the use of eco-friendly and sustainable materials.

We use reusable flooring and low-impact modular structures, complemented by a catalogue of rental furniture designed to be reused across multiple projects and occasions.

This approach allows us to move beyond a purely consumption-driven model, promoting a more responsible and circular way of working.

SUPPLIERS

Our structures are built using the Aluvision modular system, featuring 100% reusable and recyclable aluminium frames.

A versatile solution for walls, video walls, suspended structures, illuminated elements, and displays, combining sustainability, precision, and flexibility.

For structures and finishes, we prioritize the use of reusable and recyclable materials.

Carpets and wooden flooring, including options made with recycled content, are designed to be reused multiple times and recycled at the end of their life cycle.
