Aluvision

BEYOND DESIGN.

Innovation is essential for every company and professional. At KreMa, our added value lies in being a proactive partner, bringing cutting-edge solutions to the world of exhibition design.

The Aluvision system is one of the best solutions we have adopted to make a real step forward in terms of quality and the optimization of exhibition setups.

Thanks to the Aluvision Frame System, it is possible to create high-impact structures from modular elements, complete with graphics, multimedia features, and display solutions.

INNOVATION.

EFFICIENCY.

SUSTAINABILITY.

QUALITY.

MODULARITY.

OUR
GOALS.

The Step Floor raised flooring system consists of a simple combination of fixed frames, corner modules, and edge modules.

Since the system is made from extruded aluminium profiles, the dimensions are highly flexible, while the frames remain extremely lightweight and easy to handle.

FLOOR RING

WALLS.

Aluvision makes it possible to create dynamic and modern designs, offering a simple and modular solution for exhibition stand design.

Alubond panels are secured using Velcro, while fabric graphics are fitted with a silicone edge, combining the strength of rigid panels with the visual impact of fabric graphics.

We also offer a range of overhead solutions to make each project even more dynamic.

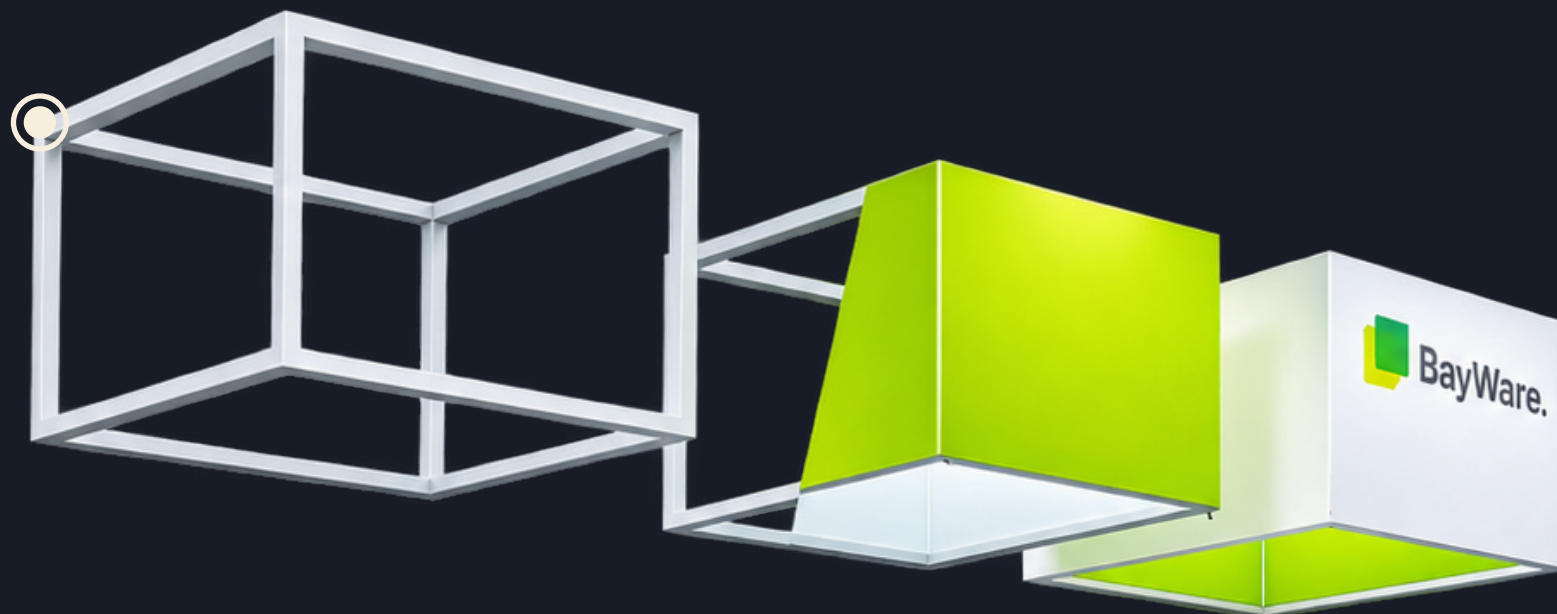

The structural profiles are designed to minimise weight and assembly time.

The fabric can be tensioned at the top, bottom and all around the structure, making the aluminium frame virtually invisible.
